

When users navigate to root page at local:3000, they are shown a 'Log In' page.

Here they must enter their username or their email address along with their password and click on the 'Log In' button before they can access the system.

If the user is new to the system, they will need to generate a user profile/account. They can do this by clicking on any of the 'Sign up' links on the page.

When the user signs up for a new profile or logs in as normal they're brought to the holiday index page.

This page lists all of the holiday bookings that the user has made. If this is the first visit then there will of course be no bookings to display as the user is only able to see their own bookings.

From this page the user can take the following actions:

- Log out of the booking system
- Create a new holiday booking
- Show a full holiday booking
- Edit an existing holiday booking
- Delete an existing holiday booking

The screenshot shows a web browser window with the URL `http://localhost:3000/holidays`. The browser's address bar and navigation buttons (back, forward, home) are visible. Below the address bar, there are four placeholder icons (squares with an 'X') and a dark grey navigation bar. The navigation bar contains the text "Logged in Successfully" and "Welcome Elliot! Not you? Log out".

The main content area is a light grey rectangle. Inside it, there is a white box with a dark border. The box contains the title "LJMU Staff Holiday Booking System" in bold. Below the title, there is a link "New Holiday". Underneath the link is a horizontal line. Below the line is a table with the following structure:

Date From	# Of Days	Date To	User	Approved			
<hr/>							

Below the table, there is another link "New Holiday".

At the bottom of the page, there is a dark grey footer bar with the text "Site Design by Elliot Wainwright".

When the user clicks on one of the 'New Holiday' links they are brought to this page.

Here the user can use the following functionality to create a holiday booking:

- Use the date picker to select the starting date of the holiday.
- Enter the number of days they want to take. Half days are possible here.
- Use the date picker to select the end date of the holiday

The page has dynamically updated calendars which indicate the current date and assist the user in picking the exact days they want in that the user can see the days of the week for each month.

The user clicks on the 'Save Changes' button to submit the request.

Site Design by Elliot Wainwright

When the user submits a holiday booking they are taken to this page.

Here they are shown the details of the booking they have just made and have the following options:

- Edit the holiday booking
- Delete the holiday booking
- Return to the the full list of their holiday requests

If the user chooses to see the full list of holidays they can now see the holiday booking request they have just submitted along with all of their previous bookings.

These bookings are shown in a table and to the right of each booking are three links which offer the following functionality:

- Show the holiday booking
- Edit the holiday booking
- Delete the holiday booking

They can also create a new holiday request

New Holiday

Site Design by Elliot Wainwright

If the user chooses to edit a holiday booking they are shown this page.

This page offers the same functionality as the new holiday booking form. The user can:

- Use the date picker to select the starting date of the holiday.

- Enter the number of days they want to take. Half days are possible here.

- Use the date picker to select the end date of the holiday

If the user decides to destroy a holiday booking record, they click on the 'Destroy' link.

Before the record is removed from the database, they are asked to confirm that they want to delete the booking.

From this page, and any page within the system, they can log out by clicking on the 'Log Out' link in the top right-hand corner.

There is an administrator account for the system which has two extra features over regular accounts.

These are:

The ability to approve holiday bookings

And

The ability to see all requests made by all users rather than just one

The log-in details for the administrator profile are:

Username: Administrator

Password: Admin

Site Design by Elliot Wainwright

When an administrator clicks on the 'Edit' link, the same edit page that a regular user would see is displayed, however, where regular users are shown a label displaying the approved status of a holiday booking, an administrator is shown a checkbox which enables them to change the status of the request.
